

Fire Protection Services

WHAT WE DO

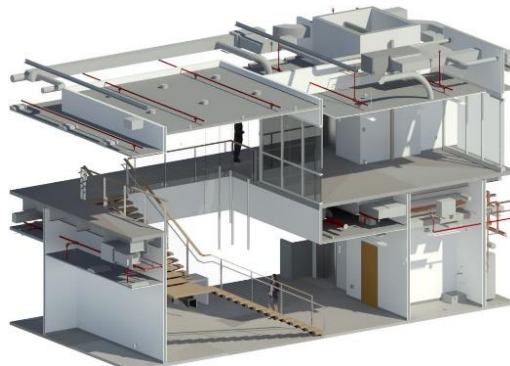

- Clean Agent System Design
- Code Reports
- Fire Alarm Design
- Fire Sprinkler & Standpipe Design
- Mass Notification Systems
- Fire Pump & Storage Systems
- Smoke Control & Fire Modeling
- Stock & Fabrication Listing

UNIQUE TO SSC: SHOP DRAWING & UPFRONT DESIGN

We specialize in fully-engineered design which includes all piping designed and coordinated alongside hydraulic calculations which creates a comprehensive design package that has saved considerable overall cost and time across multiple projects. We design both for architectural packages as well as for contractors in shop drawing submittals.

WHY USE SSC FOR FIRE PROTECTION

Our fire protection team not only has a variety of fire protection experience, but we use industry-leading fire protection tools, all in Revit, to design systems. As a result, we readily coordinate across other disciplines, render in real-time, and produce at speeds similar to or faster than traditional 2-D CAD drafting.
